```
CC describes TANGO 266, TANGO 261 proteins. The specification also CC describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO CC describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO CC cellular differentiation and/or modulate cellular proliferation, modulate cellular describes on the proteins CC can be used to treat any von Willebrand factor-associated disorder. CC regulate extracellular matrix structuring, cellular adhesion, and cell ctrafficking and/or migration, modulate cellular adhesion, and cell cellular describes, modulate cellular interactions, modulate cellular adhesion, and cell cellular describes, modulate the cellular interactions, modulate the cellular cancer, modulate the proliferation, and/or function of cells that appear in the bone matrow, and leukocytens, and/or function of cells that appear in the bone matrow, and leukocytens, treat bone marrow, blood and cellular congestion or oedema, emphysema, chronic bronchitis, bronchial asthma and composition or oedema, emphysema, chronic bronchitis, bronchial asthma and compositis can disease, modulate the proliferation, differentiation, and/or cellular diseases, modulate the proliferation, differentiation, and/or cartilage cells and to treat diseases.

CC associated with the ovaries, and cerebral oedema, hydrocephalus, brain cerebral toxoplasmosis, Parkinson's cellular disease, cerebral toxoplasmosis, Parkinson's cellular cancers. bydrocephalus and celebrate collabates. Brain cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; Alzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel human and murine secreted proteins designated TANGO 216, 261, 266 and 267 useful as modulating agents of cellular processes, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure;

New polypeptide useful for diagnosing and monitoring the presence and metastases of prostate cancer in a patient and as a component in databases for search analysis as well as in sequence analysis algorithms.

Claim 1; Page 166-167; 242pp; English.

The invention relates to an isolated polypeptide comprising a sequence with 60 % identity to one of prostate specific protein (PSP) sequences, cc or comprising an amino acid sequence encoded by one of 136 nucleotide cc prostate specific nucleic acids sequences, PSNA, (or a sequence that cc hybridises to it or is 60% identical to it), given in the specification. CC Also included are a vector comprising the polynucleotide, a host cell cc mystising the vector, an antibody specific for the PSP proteins and a cc vaccine comprising the protein or polynucleotide. The PSP and PSNA are cuseful for diagnosing and monitoring the presence and metastases of creative presence of prostate specific protein in a sample. An antibody to the PSP is useful for determining the presence of prostate specific protein in a sample, and for treating a cc patient with prostate cancer, which induces an immune response against creative prostate cancer cell expressing the nucleic acid or polypeptide and a component of the probes to detect, characterise and quantify hybridising nucleic acids from both genomic and transcript cand psnA are useful as components in databases for search analysis as components in databases for search analysis as components in databases for search nalysis as components in databases for search analysis as the protein and protein

                                          The present sequence is one of 3351 sequences in a library of human polynucleotides. The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polynucleotides. The probes can be used for chromosome mapping of the polynucleotide and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be generated. The polynucleotides and their gene products are used as genetic or biochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and preventive interventions. The polynucleotides, polypeptides and cantibodies against them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia,
                                                                                                                                                                                                                                                                                                              Library of polynucleotides for diagnosing a cancerous state of mammalian cell and detecting cancer, particularly of the colon prostate, comprises 3351 human polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                           Williams LT, Escobedo J, Innis MA, Garcia PD, Klinger J;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 뭉
The invention relates to 9672 polynucleotides (ACL53866-ACL63537) which are differentially expressed in colon cancer cells. The invention also relates to vectors and host cells comprising a differentially expressed polynucleotide of the invention; a method for detecting a cancerous cell by detection of a gene product of the polynucleotides; a method for inhibiting a cancerous phenotype of a cell by inhibiting a gene product of the polynucleotides; a method of treating an individual with cancer by administration of a method of treating an individual with cancer by administration of a modulator of a gene product of the polynucleotides; and an isolated antibody that specifically binds to a polypeptide encoded
                                                                                                                                                                                                                                                 New isolated polynucleotides, which are differentially expressed in colon cancer cell, useful for treating cancer, e.g. colon cancer, breast cancer, or pancreatic cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Differential
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              24-MAR-2005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ACL59789

The polynucleotides are also useful as a source of probes or primers for use in diagnostic methods. The differentially expressed polynucleotides or their encoded proteins can additionally be used as vaccines to modulate primary immune responses for the prevention or treatment of cancer. The present sequence expressed in colon cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                by one of the 9672 polynucleotides. The polynucleotides, polypeptides, antibodies, and methods are useful for the detection of cancerous cells; for the diagnosis, prognosis and management of cancer; for the identification of agents that modulate the phenotype of cancerous cells; for the identification of therapeutic targets for cancer chemotherapy; and for the treatment of cancer, especially colon cancer and metastanized.
                                                                                                                                                                                            Human; nootropic; immunosuppressant; cytostatic; gene therapy; cance peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   $\times \times \
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human nucleic acids (AAI57798-AAI61369) and the CC encoded polypeptides (AAM38642-AAM42213) with nootropic, cimmunosuppressant and cytostatic activity. The polynucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic clateral sclerosis, and Shy-Drager Syndrome. Other uses include the cutilisation of the activity, chemotactic/chemokinetic activity, haemostatic cand thrombolytic activity, cancer diagnosis and therapy, drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and CC c.N.S disorders. Note: The sequence data for this patent did not form over the control of the printed specification

The present invention describes a method (M1) for determining a toxicological response to an agent, which comprises comparing the expression profile of one or more human toxic response genes to a reference gene expression profile indicative of toxicity, and so determining the presence of a toxic response to the agent. Also described: (1) an array comprising one or more polynucleotides selected from the genes corresponding to the partial sequences given in ABZ82842
                                                                                                                               Determining a toxicological response to an agent, useful drugs, comprises comparing the expression profile of one toxic response genes to a reference gene expression profi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC to ABZ84764, or their fragments of at least 20 nucleotides, or homologues cc; and (2) determining if a gene putatively identified to be a toxic cresponse gene plays a role on toxic response pathways by determining the cxpression profile of the gene after exposure of cells or a human subject to a known toxic pharmaceutical or industrial agent, comprising; (a) cxposing cells to an agent or isolating cells from a human subject who cc was exposed to an agent; (b) obtaining the test gene expression profile cfor a putatively identified toxic response gene after exposure to a known cc profile to the expression profile of a gene with a similar function or cc comparing the test profile to the expression profile to the expression profile to the expression profile to the standard toxic compounds. The methods are useful for creposure to other known toxic compounds. The methods are useful for credicting and determining toxicological responses on a cellular, organ credicting and determining toxicological responses on a cellular, organ cor system level. The arrays comprising the human genes are useful for toxicological screening of drugs, pharmaceutical compounds and chemicals

                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid molecule encoding a CC Mechanically Induced Vascular Receptor (MIVR) 1 polypeptide having cardiac cell anti-apoptotic activity and fragments of it provided they cardiac cell anti-apoptotic activity and fragments of it provided they cardiac cell anti-apoptotic activity and fragments of it provided they cardiac cell sexpression vectors, host cells, the MIVR-cc 1 polypeptide, MIVR-1 binding peptides, modulators of MIVR-1, contacting cardiac cell anti-apoptotic activity with a candidate agent, where the molecule is a nucleic acid molecule comprising MIVR-1, CC IEX-1, VUDP-1, BTG-2 and TIS-11d or its expression product, determining cc if the anti-apoptotic activity is modulated and thereby identifying a modulator. The cardiac cell anti-apoptotic molecules and nucleic acids of the invention are useful for treating, diagnosing and monitoring cc progression of such diseases and disorders as characterised by increased apoptotic cell-death of vascular endothelial cells e.g. cardiac chapper trophy, myocardial infarction, stroke, arteriosclerosis and heart cardiac are apoptotic hare homologous to the cDNA for human MIVR-1 and which
                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches 302;

The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. AA525859-Z53014 represent expressed sequence tag (EST) fragments derived from a human pancreatic tumor CDNA library and which encode the proteins represented

Merberg D,
                                                                                                                                                                                                                                                                                                                                                                                     the identification and isolation of full-length cDNAs and genomic DNA molecules which correspond to the SESTS. Proteins encoded by the SESTS are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation disorders (haemophilia, thrombosis), inflammatory disorders (Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20-APR-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO200021990-A1

                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel nucleic acid sequences that are expressed by human prostate cancer cells. The nucleic acid sequences of the encoded proteins are useful as targets for treating, preventing and/or diagnosing cancers, particularly prostate cancer. The present sequence is one such nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             24-MAR-2005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ADW43372 standard; DNA; 310

The nucleic acid sequences of the encoded proteins are useful as targets for treating, preventing and/or diagnosing cancers, particularly prostate cancer. The present sequence is one such nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; SEQ ID NO 172; 198pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid sequence that is expressed by human prostate cancer cells, useful as target for treating, preventing and/or diagnos: cancers, particularly prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Einstein R,

                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to novel nucleic acid sequences that are expressed by human prostate cancer cells. The nucleic acid sequences or the encoded proteins are useful as targets for treating, preventing and/or diagnosing cancers, particularly prostate cancer. The present sequence is one such nucleic acid of the invention.
Human; ss; sequencing by hybridisation; SBH; expressed genome mapping; biodiversity; genetic disorder.

Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (BST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (LABA/)

                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 467 BP; 133 A; 121 C; 131 G; 74 T; 0 U; 8 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                             in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; SEQ ID NO 2074; 44pp; English.

1st strand.cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                    For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CSODJ015DC06NP1&c=9945.r.

with a modified polylinker; Site_1: EcoR I; Site_2: Not I;
NCI_CGAP_Ch2 is a normalized cDNA library containing the
following tissue(s): Chondrosarcoma Grade II. The library
was constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT773-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(dT)18 tail. The sequence tag for this library is
